Cyber Security – Continuation of the Cyber Security Project
“Advanced Training Course Development”
(IR-C-01-P-16)

Date 26-27 April 2016

Location RACVIAC - Centre for Security Cooperation, HR

Background This activity is a continuation of the cyber security project whose aim is to provide an opportunity to discuss the findings and conclusions of the research methodology and data collected during the research part of the project in 2015. The information and conclusions thus compiled will be used as a starting point in the development of the Advanced Training Programme which will be based on “train the trainers” concept and cyber security in practice.

The activity will be organized in cooperation with the Military Academy „General Mihailo Apostolski“ - Skopje as RACVIAC partner in the cyber security project.

“The methods that will most effectively minimize the ability of intruders to compromise information security are comprehensive user training and education. Enacting policies and procedures simply won’t suffice. Even with oversight the policies and procedures may not be effective: my access to Motorola, Nokia, ATT, Sun depended upon the willingness of people to bypass policies and procedures that were in place for years before I compromised them successfully.”

Purpose & Objectives The purpose of the workshop is to bring together cyber security experts from the SEE region in order to work on the development of the Advanced Training Course program. The designated topics for the Training Course will be in line with the individual countries’ needs and best practices.

Participants The participants should be cyber security experts from the SEE region governmental institutions and agencies, preferably those individuals who already took part in the RACVIAC Cyber Security Project.

Methodology The event will last one day. The working language will be English.
