Introduction

Based on the conclusions of a series of events organized within the C-WMD Network, where cyber issues were identified as a common modern threat to our security, RACVIAC - Centre for Security Cooperation in cooperation with the Defense Threat Reduction Agency (DTRA) from the USA, (http://www.dtra.mil/), and with the financial support of the Federal Republic of Germany, organized the Cyber Security Course related to WMD Cyber Crimes Investigations.

The aim of the WMD Cyber Crimes Investigations Course was to instruct nontechnical investigators on the fundamental skills needed to exploit digital technology to combat the proliferation of weapons of mass destruction (WMD) and misuse of dual-use materials and technologies. Furthermore, the goal was to improve the ties between the representatives of the relevant institutions from the SEE region, and to exchange information, transfer knowledge, views and ideas. Moreover, the aim was to expose the Course participants to the experiences of experts.
Cyber Security: Training on WMD Cyber Crimes Investigations

from various U.S. government agencies who have the legal authority and the technical knowledge concerning cyber threats.

The Course participants were the representatives of the relevant ministries and agencies from the following countries: Republic of Albania (2), Republic of Austria (2), Bosnia and Herzegovina (2), Republic of Croatia (5), Montenegro (1), the former Yugoslav Republic of Macedonia* (2), Romania (1), Republic of Serbia (2), Republic of Turkey (5), Kosovo** (2), and RACVIAC Staff (1).

Execution

The Course lasted 5 days and consisted of theoretical and practical exercises done on computers.

Opening the Course Ambassador Haydar Berk, Director of RACVIAC - Centre for Security Cooperation said that “cyber space, commonly recognized as the battlefield of the future, is perhaps already there. Therefore, it is of utmost importance to develop the capabilities in our region, to be well prepared to protect our countries’ critical infrastructure, to detect and to take the necessary measures against illegal, criminal cyber activity, against terrorism or other forms of destabilizing attacks.

Close regional and wider cooperation and networking is the only way to have a strong response to today’s challenges to security, leading to building of trust and confidence, harmony and enhanced synergy in our region”, added Ambassador Berk.

Greeting the participants on behalf of the United States Defence Threat Reduction Agency Mr. Russell Adam Dallas underlined that the cyber domain is very demanding since it changes all the time and touches everything in our lives, not only the investigations but the every day aspect of our lives too.

Conclusion

The participants learned about the current cyber environment and the technologies presently employed by cyber experts to further criminal investigations. In doing so, the participants were introduced to and gained limited competency in cutting-edge, open-source software and tools that help investigators analyze the data from devices, digital media, or social networks. The participants were also introduced to the technology of the future, including the use of the Darknet, botnets/malware, and cryptocurrencies.

During the Course the participants had an opportunity to analyse the methods and tools for preventing, deterring, detecting, and countering the threat of WMD proliferation by securely utilizing digital technology in support of WMD-related investigations. The participants also learned how to use open-source tools and technologies that can be used to support ongoing investigations across a range of criminal activities. Throughout the practical part of the Course the participants learned how to gather intelligence using the web-based open sources tools, to collect and analyse seized digital evidence, and how cyber investigative

techniques can be integrated with the “traditional” investigative techniques. In addition to this, the participants learned about digital forensics in order for investigators to locate potential evidence.

The Course proved to be worthwhile, as it provided an opportunity to the participants to exchange knowledge, discuss topics and generate ideas about cyber security with lecturers and individually. At the end of the Course the participants gave responses to the Course Questionnaire and all of them assessed the activity in a positive manner. They suggested that it would be useful to repeat the activity next year too.

All participants considered the Course overall, and practical exercises specifically, valuable for their future work.

Throughout the Questionnaire the participants also assessed the lecturers as very well prepared and ready to share their experience and knowledge with the participants.

The Course was very well organized due to excellent cooperation and relations between RACVIAC and the Defense Threat Reduction Agency (DTRA).
